Telegram Bot for Bus Data Retrieval

- Developed a Telegram bot using Laravel that allows users to fetch and compare bus information from popular bus booking APIs including RedBus, AbhiBus, Goibibo, and Paytm Bus.
- Implemented web scraping techniques and integrated these APIs to gather real-time data on bus routes, prices, and availability.
- Designed a user-friendly interface that accepts user input, such as the source and destination cities, date of travel, and sorting preferences.
- The bot intelligently retrieves and presents bus options from multiple sources based on user criteria.
- Achieved efficient data sorting and filtering capabilities, enhancing the user experience by providing comprehensive bus information for informed decision-making.
